Projects

Project: Nysa- Motor

Role: Senior Angular Developer
Technologies: Angular 16, Angular Material, Restful APIs in .NET Core, HTML 5, CSS 3, SCSS, AWS, GIT, Oracle, AWS
Description: Nysa Motor- ICICI Lombard is a Angular based Web application agent portal, where agents / vendors can punch policies on behalf of customer.

Agents do business by buying 2-Wheeler Package, 4-Wheeler Package, 2-Wheeler TP, 4-Wheeler TP, SAOD, Home Bundle etc. where products add-on depending on the vehicle model and CC configured by Underwriter.

Once you calculate Quote and take suitable add-on, premium gets calculated and you can send those Premium plans to customer using "Send Link" button.

On Proposal page you can actual punch policy and send the actual pdf on mobile SMS, WhatsApp, email. Agents can do Insta payment / offline payment / online payment / Cheque Payment.

Responsibilities:
• Developed different modules, components of application in Angular.
• Integrated the APIs and functionally added logics if the plans are not valid for customer.
• Created routing, handled local storage, wild card routing, Special Characters, application Security   Related issues.
• Analysed the CR / Bugs / RCA / BRS / Jira / Figma / XDD requirements and converted them into solutions.

Project: NSE (National Stock Exchange)

Role: Frontend Lead Developer
Technologies: Angular, Angular Material, Java Script, Typescript, RxJS, Spring Boot & Microservices, HTML 5, CSS 3, Oracle, GIT, Bitbucket
Description: NSE is the Angular based Web application where every offline process got digitalized. Company who wants apply for EIPO will register in NSE- will apply, financial background verification will be done, it may take 3-4 months. Individual, LLA, Partnership-firm, corporate bodies can apply.
Form filling, E-KYC, document upload was the actual part of the process.
Several journeys / project parts are there like AR- Annual Return, Half Yearly, AIML, KMP, MTR, Equity-IPO.

Responsibilities:
Developed the application in Angular using Angular Material and "Parivartan" internal library.
Integrated the API calls for document and file upload.
Created customised and enhanced components using Angular material.
Resolved complex defects of AR, HYNW, AIML, KMP, E-IPO journey at the time of journey Go-Live and able to handle the other front end team members (New Joiners) and other Peer coders
as a Front-End lead. Also worked in multiple epics of EIPO journey and was able
to close the assigned tasks, defects and also helped in the Production deployments.

Project: Microsoft Localization / Internationalization (Multi-language) Feature

Role: Frontend Developer
Technologies: Angular, JavaScript, Typescript, HTML 5, CSS 3, VSTS
Description:
Microsoft's every Product release has different domain release and each domain depending on the requirement and region have different language translation requirement. For example:-

> https://www.visualstudio.com/products/visual-studio-team-services-pricing-vs
> https://vsstage.redmond.corp.microsoft.com/products/vs-2015-product-editions
> https://www.visualstudio.com/
> https://msdn.microsoft.com/
> https://msdn.microsoft.com/applicationbuilder

Every web page will display accessible / available language and whole web page will be converted into the selected native / international language. Using Harmony and Compass CMS – language directives used to maintain.

Responsibilities:

- To create and update the web pages for Microsoft sites like MSDN, TechNet, Visual Studio, imagine etc. as per client(Microsoft's) requirement .

- To make the responsive web pages for all devices (Desktop, Laptop, iPad, Tab, Mobiles) with the help of media query or Bootstrap, I have created and updated the most of pages as mentioned above.

- To create and update the web pages for Microsoft sites like (Partner Centre and Hardware Dev centre and Windows Dev Centre, Microsoft Privacy Statements PMC etc.) as per client requirements.

- To give the training to team members for HTML, CSS, JavaScript, Angular etc. and project related training for new members.

- Tools that I have used are Harmony, Compass, Source Depot, Beyond Compare, Visual Studio Code, VSTS etc.

Project: Quikr India Pvt Ltd.

Role: Project Executive
Technologies: PHP
Description:
Quikr is a PHP language based online website where you can post advertisement to Sell, Buy, Rent, hire for Service, tutor, Real Estate buy sale etc. It is the platform where buyers and sellers will see your Ads and they can contact directly. Premium subscriptions are available for the customer who needs priority basis services like Real Estate.

Responsibilities:

- To help to suggest some keywords on website as soon as customer types / selects particular category.

- Depending on the customer search / interest , show them the nearby same requirement / sellers contact which are premium.
- To make the website look good , if images are available then to show them on the top search to get more responses.
- Gained knowledge and practical experience in PHP development.
